**Subject:** [Non-DoD Source] Paper is in press.  
**Date:** Wednesday, April 29, 2020 1:06:55 PM

---

Dear Kristy:

The paper that shows distinctive convergence eye movement features from the Havana exposure is now "in press". The abstract is posted on line

<https://www.frontiersin.org/articles/10.3389/fneur.2020.00469/abstract>.

The results demonstrate an objective test for distinguishing the Havana cohort from people with mild traumatic brain injury and control subjects. It's fairly straight-forward to adapt the technology at 6.3 and up for forward deployment.

Best,

Carey
